# PORTUGUESE BANKING SECTOR OVERVIEW

**MARCH 2019** 

## INDEX

- I. Portuguese Banking Sector
- II. Financial Position Lending
- III. Funding and Liquidity
- IV. Solvency
- V. Profitability

Annex I: Methodology

## I. Portuguese Banking Sector

- □ The Portuguese banking sector is more resilient and better prepared to deal with potential adverse shocks. Significant progress has been achieved in terms of solvency, liquidity, asset quality, efficiency and profitability.
- □ In the first quarter of 2019, the stock of loans to customers continued to decline, but at a residual rate. Currently, deleveraging reflects mainly the reduction of non-performing loans (NPL).
- Strong progress in NPL reduction. Since the peak reached in June 2016, NPL have decreased by 26 billion euros. In that period, the NPL ratio decreased by 9 pp to 8.9% and the impairment coverage ratio increased by 9 pp to 52.2%.
- □ There has been a reinforcement of customer deposits as the main source of funding, despite the very low interest rate environment.
- In the first quarter of 2019, profitability was positive, decreasing slightly compared to the same period of the previous year.
- Liquidity remains at comfortable levels: the funding gap has been declining, the loan-to-deposit ratio has continued its downward trend (it decreased approximately 71 pp from the peak reached in June 2010), and the liquidity coverage ratio has been increasing, being considerably above the required minimum requirement of 100%.
- Solvency has been improving, reflecting the strengthening of own funds, the favorable evolution of riskweighted assets, and improved profitability. The leverage ratio is considerably higher than the Euro Area average and the reference minimum (3%).

As a result of the recapitalization measures undertaken since the financial crisis, shareholder structures of the main financial institutions have changed significantly.

PORTUGUESE BANKING SECTOR OVERVIEW

The adjustment process in the banking sector together with the deleveraging process contributed to a decline in the weight of total assets to GDP.

Total assets evolution (Mar-10=100)

# II. Financial Position Lending

## **FINANCIAL POSITION**

APB ASSOCIAÇÃO PORTUGUESA DE BANCOS

The significant reduction in the banking sector's total assets was mainly driven by the contraction in loans to customers. However, in Q1 2019, total assets increased 1,2% vis-à-vis the end of 2018. The exposure to Portuguese sovereign debt has been increasing.

Source: Banco de Portugal (consolidated data) e BCE – MFI Balance Sheet Items.

#### Total assets breakdown

Portugal vs. Euro Area as a % of total assets

Cash and claims at central banks and OCI Loans and advances Debt securities Others

Source: BCE – Consolidated Banking Data (consolidated data).

The stock of loans to customers, as a percentage of GDP, progressively converged towards the Euro Area average. Currently, deleveraging is less pronounced and mainly reflects the reduction of the stock of NPL, while performing loans already show a positive evolution.

Total loans (Mar-10=100) Total loans as a % of GDP 180.7% 200% 110 163.1% 180% 105 160% 100 127.8% 125.1% 140% 117.8% 116.8% 95 110.0% 105.9% 106.6% 102.9% 100.2% 120% 2% 90 96. 100% 85 80% 80 60% 75 40% 70 20% 65 0% Mar-10 Mar-11 Mar-12 Mar-13 Mar-14 Mar-15 Mar-16 Mar-17 Mar-18 Mar-19 Portugal Italy Spain France Germany Euro Area Dec-09 Mar-19 Portugal Euro Area

R ASSOCIAÇÃO PORTUGUESA

APB ASSOCIAÇÃO PORTUGUESA DE BANCOS

The deleverage has been considerably intense on the non-financial corporations (NFC) segment. Loans to households is the only segment in which the weight in GDP is above the Euro Area average.

Source: Banco de Portugal (Monetary and Financial Statistics), ECB – MFI Balance Sheet Items (Monetary and Financial Statistics) and Eurostat. Non-financial corporations include Private corporations and Public corporations not included in general government. Others include Non-monetary financial institutions: Other Financial Intermediaries, Financial Auxiliaries, Insurance Companies and Pension Funds.

The evolution of the stock of loans to NFC has been penalized by the strong efforts to reduce NPL. However, performing loans show a positive evolution since the beginning of 2018. New business lending is still lower than before the financial crisis, but has recorded positive growth rates.

New business lending to NFC (accumulated amounts)

Source: Banco de Portugal (Monetary and Financial Statistics). AGR = Annual growth rate.

R ASSOCIAÇÃO PORTUGUESA

ASSOCIAÇÃO PORTUGUESA

The reduction of the exposure to the construction and real estate sectors continues.

APB PORTUGUESA DE BANCOS

New business lending to Private individuals (accumulated amounts)

The evolution of the stock of loans to private individuals mainly reflects the progressive recovery of housing loans and the dynamism of consumer credit, as a result of a better economic environment, improvement of housing market perspectives and the maintenance of the low interest rate environment.

Stock of loans to Private individuals

Source: Banco de Portugal – Monetary and Financial Statistics. Annual growth rates (AGR) adjusted for securitization operations calculated according to Banco de Portugal criteria.

Flows of new home loans, although still below the pre-financial crisis level, increased and contributed to a less negative evolution of the stock of these loans.

Stock of loans for house purchase

Source: Banco de Portugal – Monetary and Financial Statistics.

The credit for consumption, which has been increasing since early 2016, is associated with a better economic environment. However, its weight is still low both in terms of total indebtedness (< 20%) as well as in terms of loans granted by banks and other CI (14%).

New business lending for consumption from MFI (accumulated amounts)

Source: Banco de Portugal – Monetary and Financial Statistics. Other monetary financial institutions (OMFI) are composed by banks, saving Banks, mutual agricultural savings banks and money market funds. Non-monetary financial institutions (NMFI) include credit financial institutions, credit-purchase financing companies, leasing and factoring companies and mutual guarantee societies.

2 ASSOCIAÇÃO PORTUGUESA

Repricing capacity in terms of the interest rates on housing loans is rather limited given that a substantial amount of these loans is linked to Euribor, with long maturities and fixed spreads.

Interest rate on stock of loans to Private individuals

Source: ECB – MFI Interest Rate Statistics.

PORTUGUESE BANKING SECTOR OVERVIEW

ASSOCIAÇÃO PORTUGUESA DE BANCOS

In July 2018, a new macroprudential measure came into force aiming at mitigating the risk of interaction between housing prices and the loans granted by the Portuguese financial system in order to enhance the resilience of the financial sector. This measure corresponds to a Recommendation having a preventive stance.

LTV limits	<ul> <li>LTV ≤ 90% to credit for the purchase or construction of own and permanent residence.</li> <li>LTV ≤ 80% to credit for other purposes.</li> <li>LTV ≤ 100% for credit relating to residential immovable property and credit secured by a mortgage or equivalent guarantee for purchasing immovable property held by the institutions themselves.</li> <li>Calculated through the minimum between the purchase price and the appraisal value.</li> </ul>
DSTI limits	<ul> <li>DSTI ≤ 50%</li> <li>For the calculation of the DSTI, monthly instalments of new loans are assumed constant over the entire period of the loan. For variable and mixed interest rate agreements, the impact of an interest rise should be considered. The DSTI should also take into account the impact of a reduction in the borrower's income, if the borrower's age at the term of the loan agreement is higher than 70 years old, except if the borrower is already retired at the time of the creditworthiness assessment.</li> </ul>
Exceptions to DSTI limits	Exceptions on the total amount of credit granted by each institutions: ■ Up to 20%: DSTI ≤ 60%. ■ Up to 5%: No DSTI limit.
Limits to maturity	<ul> <li>For credits relating to residential immovable property or credit secured by a mortgage or equivalent guarantee:</li> <li>Maturity of new credit agreements ≤ 40 years;</li> <li>Average maturity of new credit agreements should gradually converge to 30 years until the end of 2022;</li> <li>For consumer credit agreements: maturity of new loans ≤ 10 years.</li> </ul>
Requirement of regular payments	New loans should be granted with regular payments of interest and capital.

Source: Banco de Portugal. LTV = Loan-to-value ratio, that corresponds to the ratio between housing loan(s) and the minimum between the purchase price and the appraisal value of the house granted as collateral. DSTI = Debt service-to-income ratio, that corresponds to the ratio between monthly instalments of total credit agreements and the borrower's income, net of taxes and contributions to social security.

ASSOCIAÇÃO PORTUGUESA DE BANCOS

Countercyclical capital buffer – established by Banco de Portugal, on a quarterly basis, and currently remains at 0%.

	Should be built up to protect the banking sector in periods when risks of system-wide stress are growing due to excessive credit growth. When risks materialize or recede, such an additional capital buffer ensures that the banking sector is better equipped to absorb losses and remain solvent while continuing to provide credit to the real economy.	
Countercyclical capital buffer	<ul> <li>Banco de Portugal is responsible for setting and disclosing, on a quarterly basis, the countercyclical buffer rate that applies to all credit institutions and investment firms with credit exposures to the domestic private non-financial sector. The rate shall be set between 0% and 2.5% (of the total risk exposure amount), unless exceptional circumstances justify the setting of a higher rate.</li> </ul>	
	The countercyclical capital buffer in place for the 3rd quarter of 2019 was set at 0%.	

## **ATIVIDADE DE CRÉDITO**

NPL represent one of the most serious problems that have emerged from the global financial crisis, and its resolution remains a priority for the European Authorities. In March 2019, NPL totalled 641.3 billion euros in the Euro Area, corresponding to 3.5% of credit.

NPL ratio in the EU

Source: BCE - Consolidated Banking Data.

PORTUGUESE BANKING SECTOR OVERVIEW

In Portugal, progress in reducing NPL has been quite significant. NPL have decreased by 26 billion euros since June 2016. Despite the scale of the crisis, the composition of NPL demonstrate households resilience.

Non-Performing Loans – Loans that comply with at least one of the following conditions: i) material exposures that are more than 90 days past-due; ii) the debtor is assessed as unlikely to pay its obligations in full without realization of collateral; iii) impaired assets, except incurred but not reported (IBNR) impairments; and iv) defaulted credit, in accordance with the CRR prudential concept.

Source: Banco de Portugal (consolidated data).

Impairment coverage ratio

ASSOCIAÇÃO PORTUGUESA DE BANCOS

The NPL impairment coverage ratio and total coverage ratio are evolving positively and compare favorably with the Euro Area average.

Total NPL coverage ratio

Source: EBA – EU-wide transparency exercise. Total coverage ratio includes cumulative impairments, collateral and financial guarantees associated to non-performing loans. EBA sample includes 131 banks (Portugal: BCP, Crédito Agrícola, Montepio, CGD e Novo Banco).

Source: ECB – Consolidated Banking Data. Impairment coverage ratio refers to nonperforming loans and debt securities.

According to the Bank Lending Survey, in the second quarter of 2019 the lending policy remained broadly unchanged compared to the previous quarter. Demand for credit remained unchanged for firm loans and slightly increased for housing and consumer loans.

### Bank Lending Survey | Main conclusions

		Q3 2018	Q4 2018	Q1 2019	Q2 2019	Q3 2019 Outlook
	Firms	Unchanged	Unchanged	Unchanged	Unchanged	Unchanged
Supply	Households	More restrictive lending policy for housing and consumer loans (compliance with new macroprudential measure)	Unchanged	Unchanged	Unchanged	Unchanged

Despite the austerity programme imposed by the EFAP, depositors confidence in the banking system has not been affected. Household deposits reached their highest level ever in January 2019.

#### Evolution of deposits in Portugal (Mar-10=100)

Source: ECB – MFI Balance Sheet Items (Monetary and Financial Statistics). Deposits of Households include emigrants.

In a context of low interest rates on deposits, as a consequence of ECB's accommodative monetary policy, time deposits continued to fall while demand deposits continued to increase.

#### **Evolution of time deposits**

EUR billion

Source: Banco de Portugal (Monetary and Financial Statistics). Deposits from the non-monetary sector (end-of-period balances).

Recourse to wholesale funding has decreased substantially. Both in Portugal and in the Euro Area, deposits from the monetary sector are the main component of wholesale funding of the banking sector.

#### Wholesale funding structure

#### Source: ECB – MFI Balance Sheet Items (Monetary and Financial Statistics).

Monetary Financial Institutions (MFI) include the Central Bank and Other Monetary Financial Institutions (OMFI).

PORTUGUESE BANKING SECTOR OVERVIEW

R ASSOCIAÇÃO PORTUGUESA

The reliance on ECB funding has been decreasing steadily since the maximum level attained in June 2012. In this period, the weight of this funding source in total assets has decreased significantly from 10.5% to 4.8%.

#### Borrowing from the European Central Bank

Portugal vs. Euro Area as a % of total assets

#### Source: ECB - MFI Balance Sheet Items (Monetary and Financial Statistics).

APB ASSOCIAÇÃO PORTUGUESA DE BANCOS

Liquidity remains at comfortable levels: the funding gap has been declining, the loan-to-deposit ratio has continued its downward trend, and the liquidity coverage ratio (LCR) has been increasing.

PORTUGUESE BANKING SECTOR OVERVIEW

## IV. Solvency

## **SOLVABILIDADE**

ASSOCIAÇÃO PORTUGUESA DE BANCOS

Solvency has been improving, reflecting the strengthening of own funds by several institutions, favorable evolution of risk-weighted assets, and improved profitability. The leverage ratio is considerably higher than the EU average and the reference minimum (3%).

Common Equity Tier 1 (CET1) ratio

#### Leverage ratio

Source: EBA – Risk Dashboard.

Source: BCE – Consolidated Banking Data.

## **SOLVENCY**

In Portugal, the weight of Common Equity Tier 1 (CET1) in the own funds structure is above the Euro Area average and there has been an increase in additional tier 1 (AT1) and tier 2 (T2) capital as a result of issuances by several institutions.

Portugal vs. Euro Area

#### Evolution and structure of own funds
